Database Systems – Introduction –

Karine Reis Ferreira

karine@dpi.inpe.br

Computação Aplicada II – CAP 236

- Tópico: Sistemas de Banco de Dados
- Segunda-feira – 13:30 as 15:30
- Ementa:
 - Sistemas de Banco de Dados Relacionais
 - Sistemas de Banco de Dados Objeto-Relacionais
 - Sistemas de Banco de Dados Espaciais
 - Bancos de Dados NoSQL
 - Triplestore

Database

Database:

Organized data sets of a specific domain.

DBMS – Database Management Systems

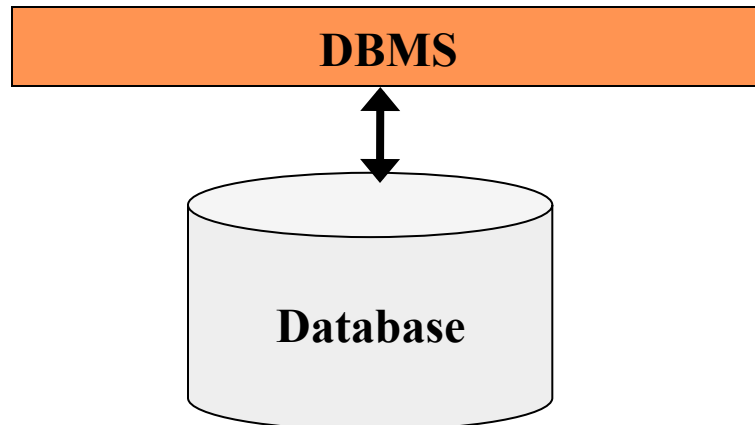

SGBD – Sistemas Gerenciadores de Bancos de Dados

DBMS:

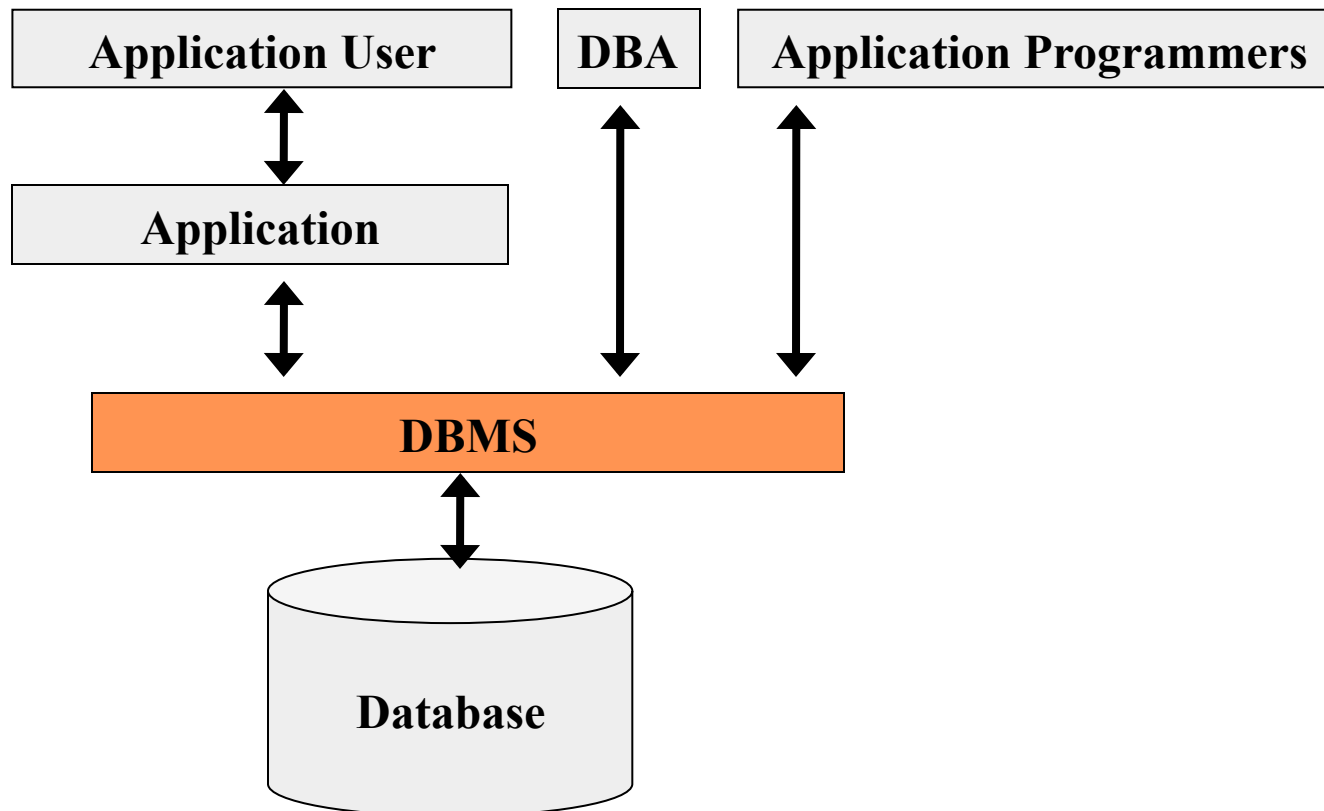

Collection of software tools to create, manage and deal with databases.

Interface between users and databases.

Examples: MySQL, Oracle, PostgreSQL, ...

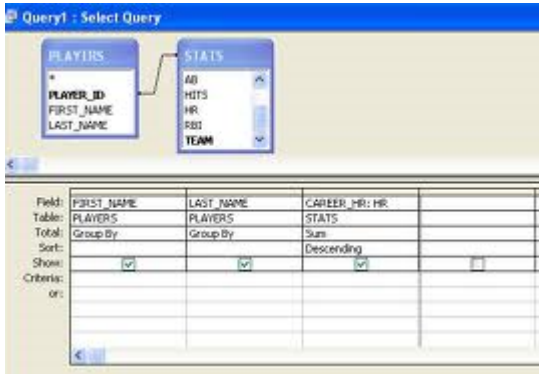

Database System

Database System

GUI

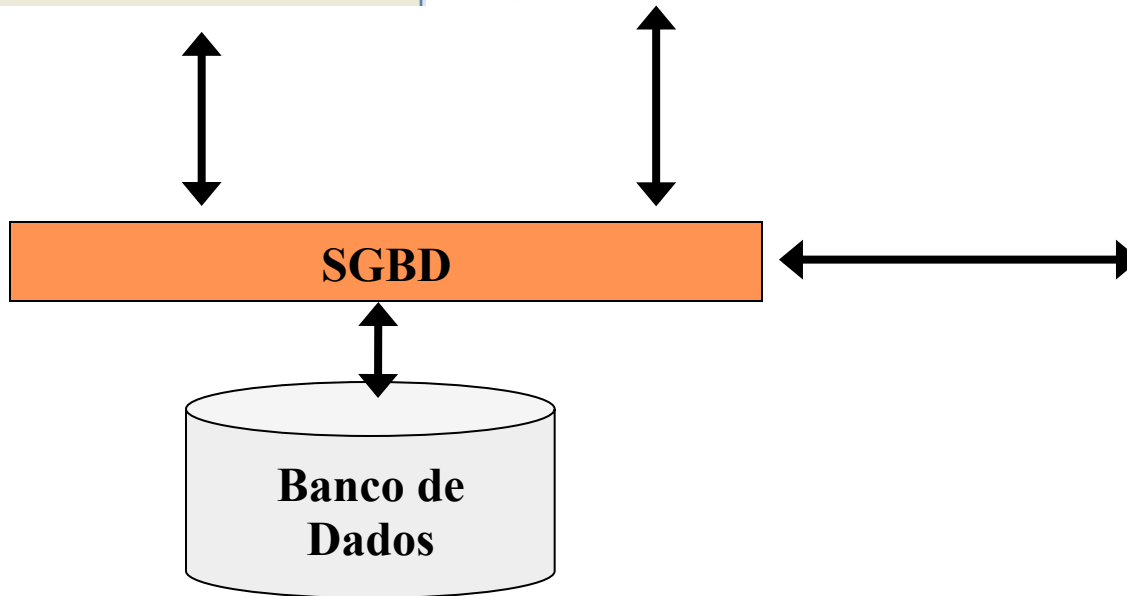

Prompt

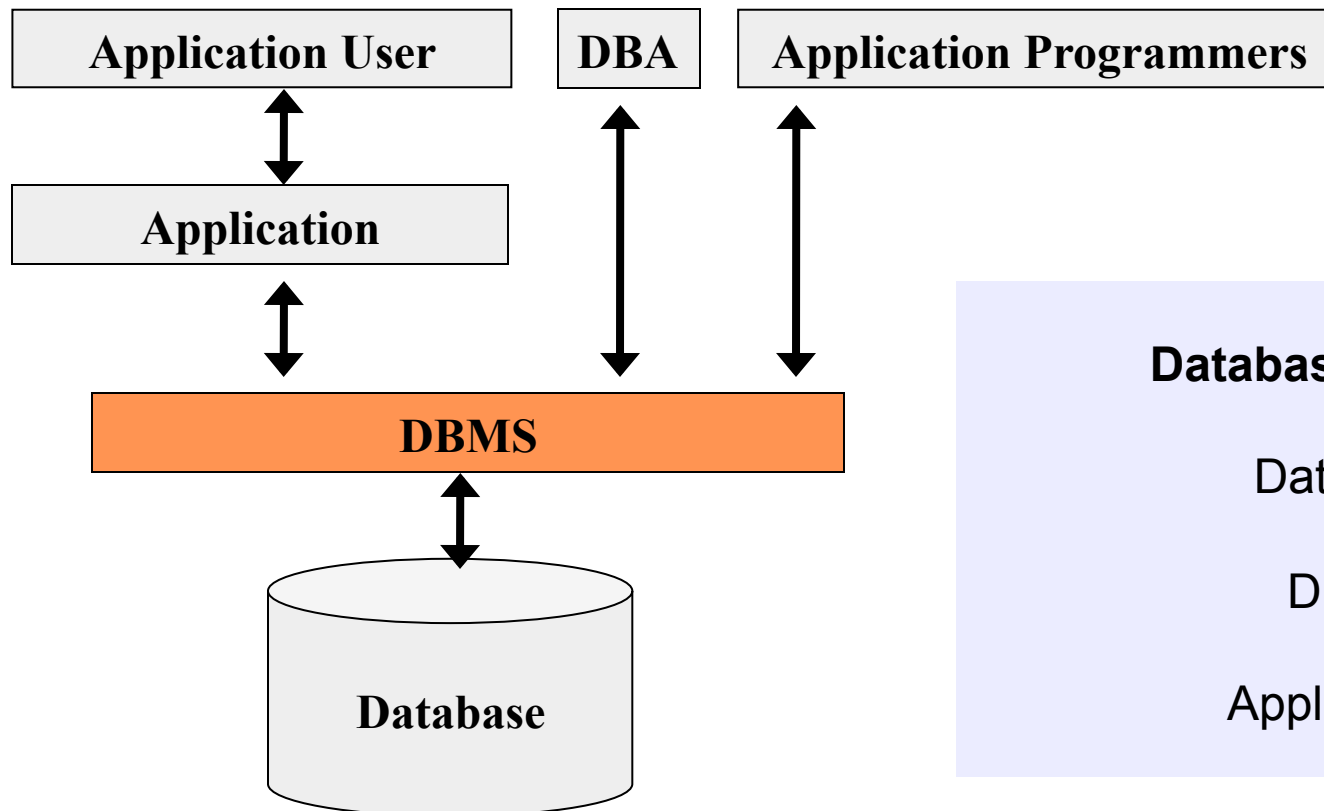

API

```
int main()
{
  ...
}
```

Database System

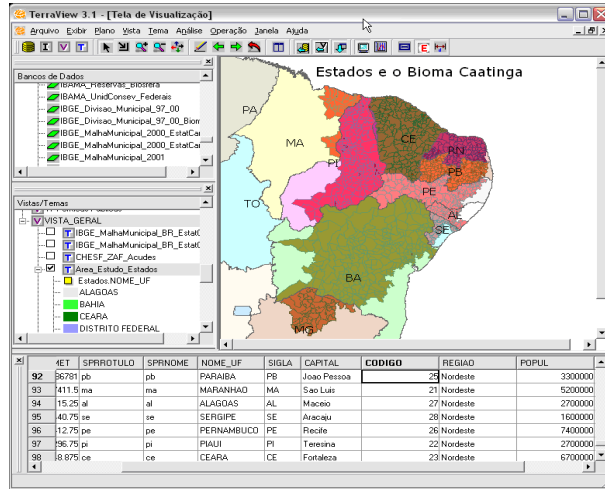

Database System:

Database

DBMS
+
Applications

Example

TerraView

Geographical Information System (GIS):

Computational systems able to store, process and deal with geographical data.

(Worboys and Duckham, 2004)

Classification

Databases and DBMSs can be categorized according to:

- the **database model**(s) that they support (such as relational or XML);
- the type(s) of **computer they run** on (from a server cluster to a mobile phone);
- the **query language**(s) used to access the database (such as SQL or Xquery); and
- their **internal engineering**, which affects performance, scalability, resilience, and security.

Database model

- How data is represented and organized in a database

Database Models and DBMS
