

3. Gerar Mapa Ponderado da Geologia

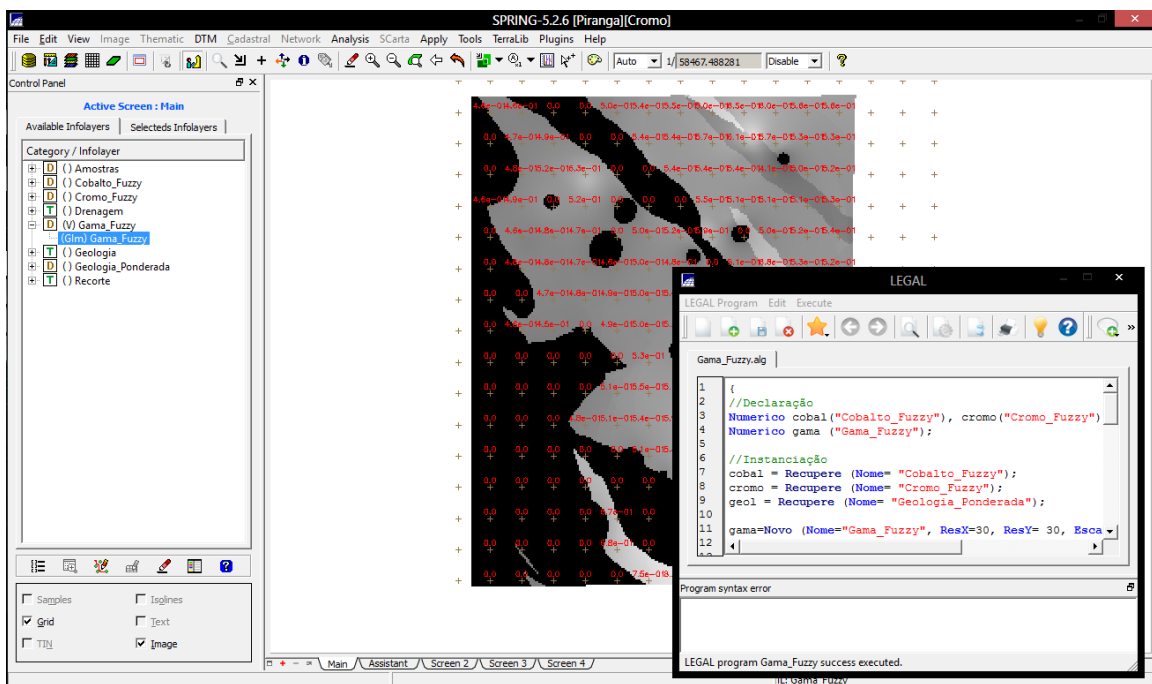

4. Mapear a grade (representação) do PI Teores_Cromo utilizando Fuzzy Logic.

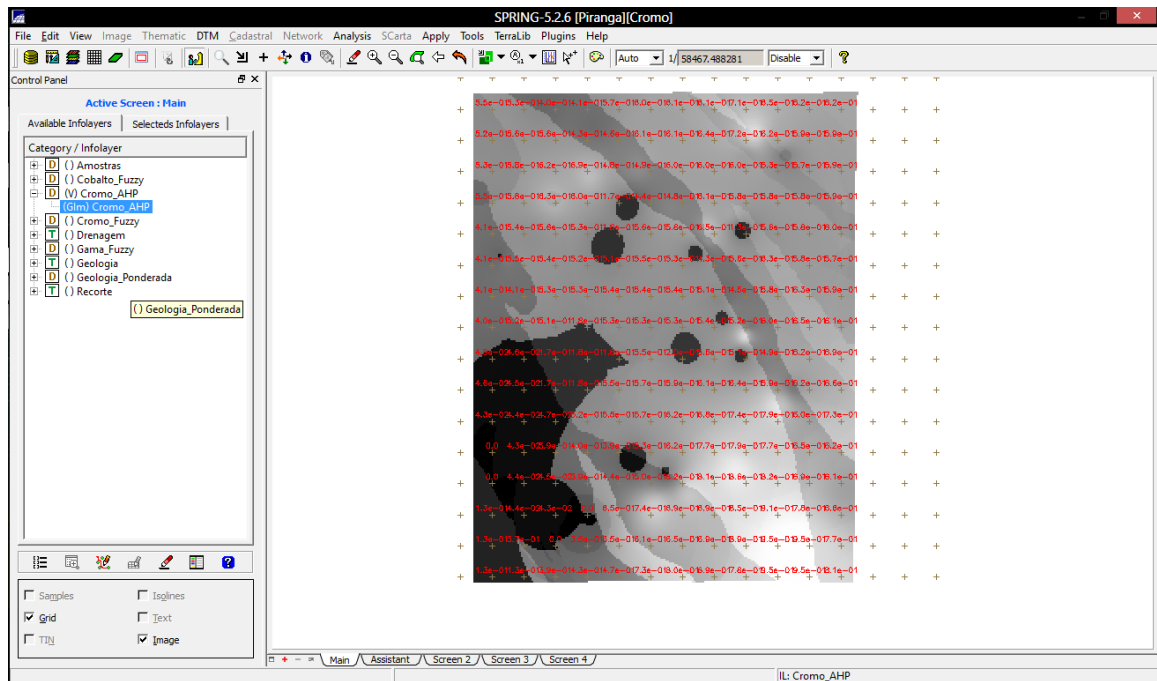

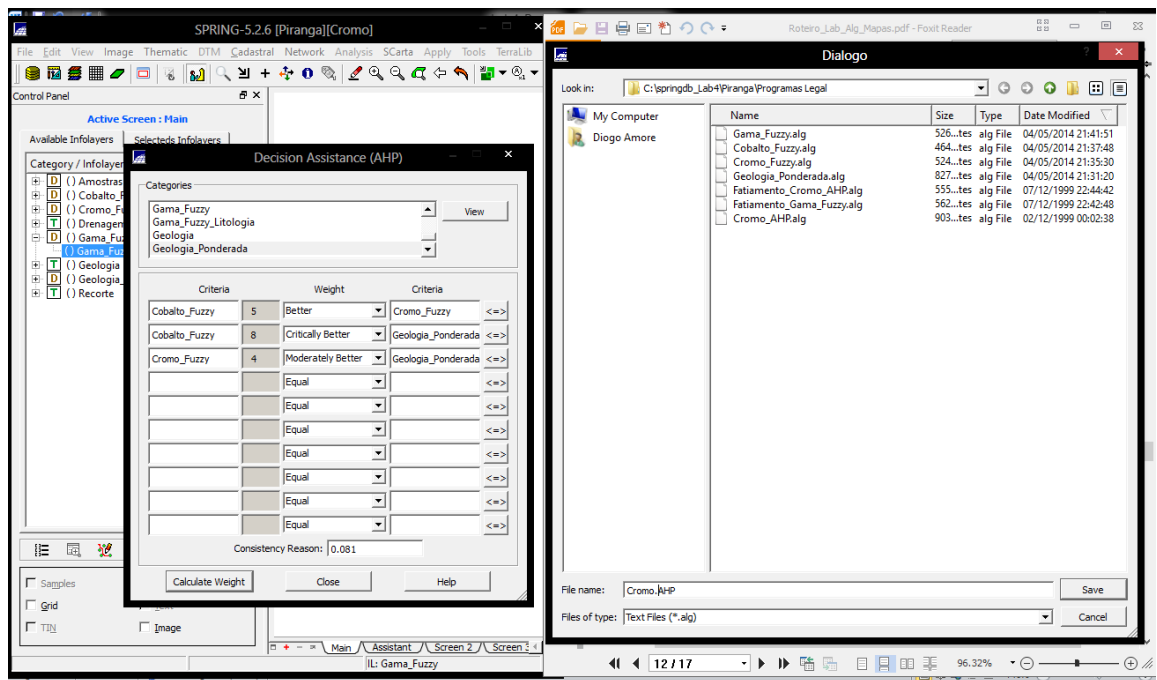

5. Mapear a grade (representação) do PI Teores_Cobalto utilizando Fuzzy Logic.

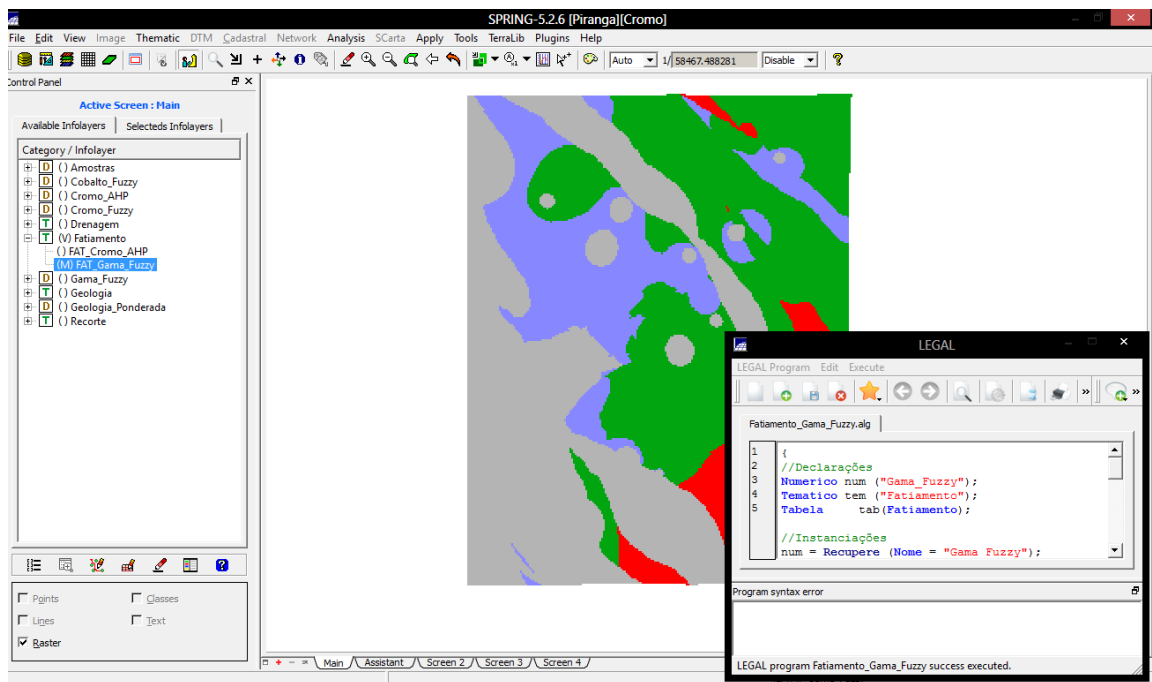

6. Cruzar os PI's Cromo_Fuzzy e Cobalto_Fuzzy utilizando a função Fuzzy Gama

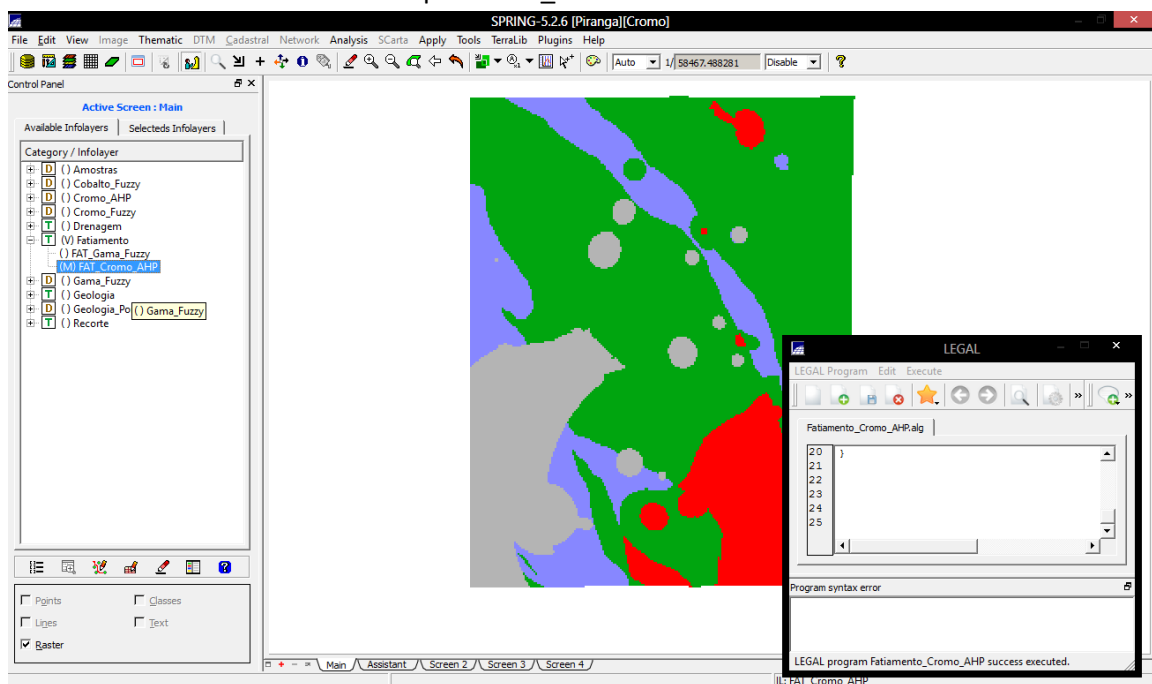

7. Criar o PI Cromo_AHP utilizando a técnica de suporte à decisão AHP (Processo Analítico Hierárquico)

8. Realizar o Fatiamento no Geo-Campo Gama_Fuzzy

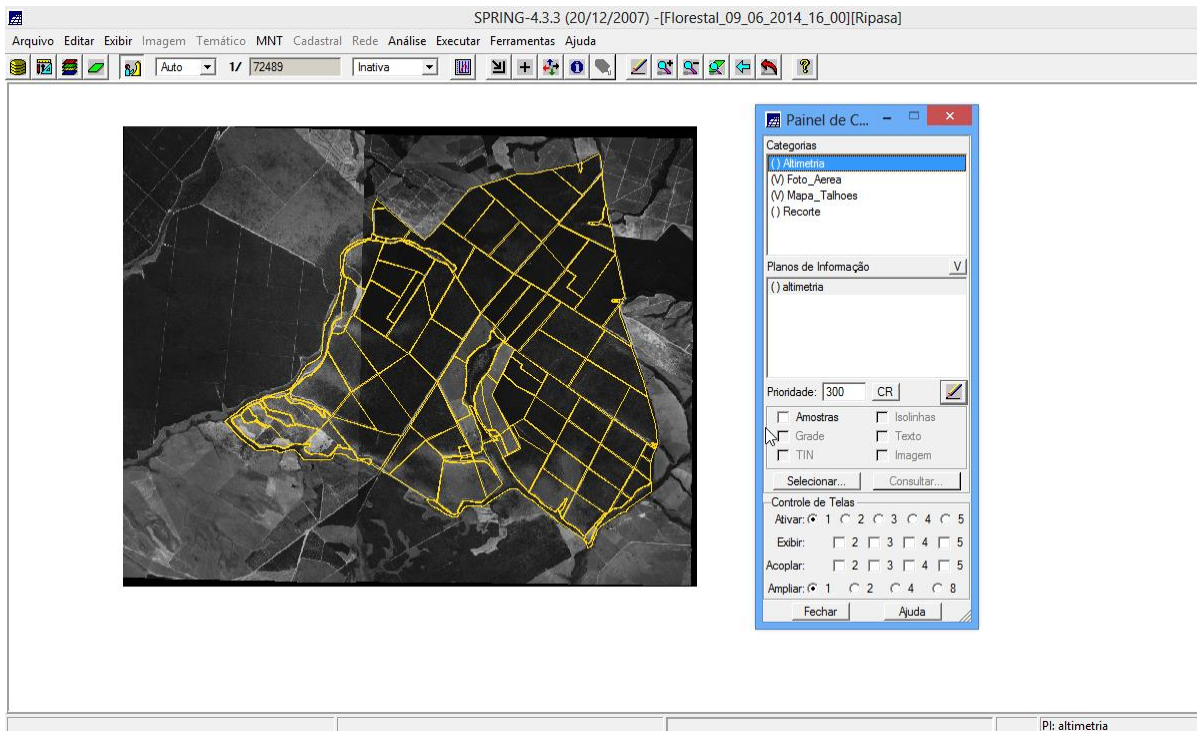

9. Realizar o Fatiamento no Geo-Campo Cromo_AHP

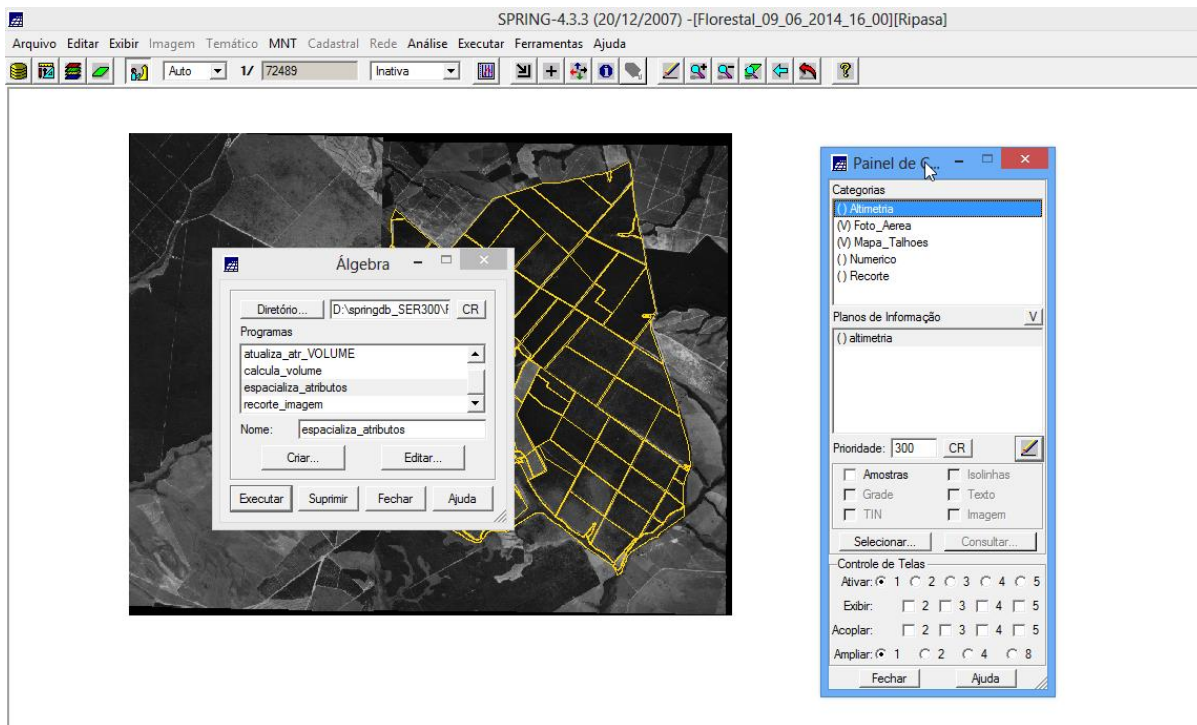

10. Etapa Final

Analisando-se as imagens nos itens 8 e 9, nota-se diferenças entre as técnicas utilizadas. As classes de médio potencial tiveram maior concordância, porém as de baixo e alto foram diferentes entre si. A técnica por lógica fuzzy demonstrou-se mais resiliente ao mapa geológico, enquanto que a AHP demonstrou efeitos maiores das grades interpoladas de cromo e cobalto.

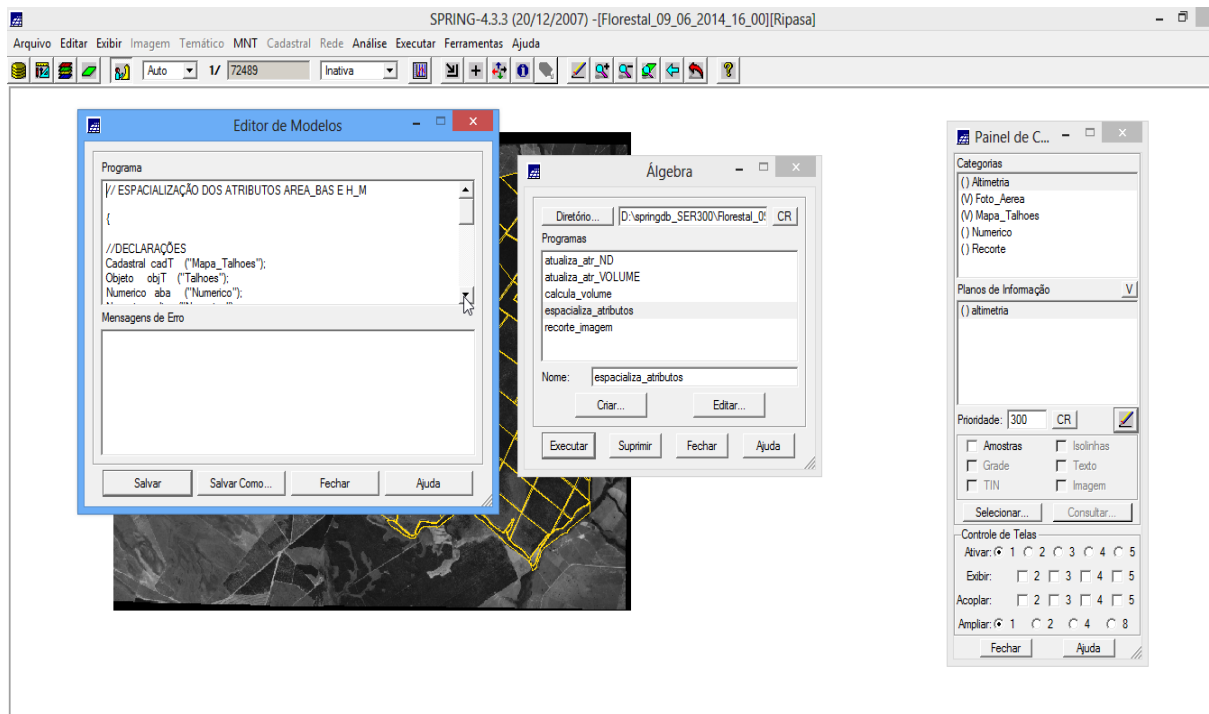

Lab 2 LEGAL

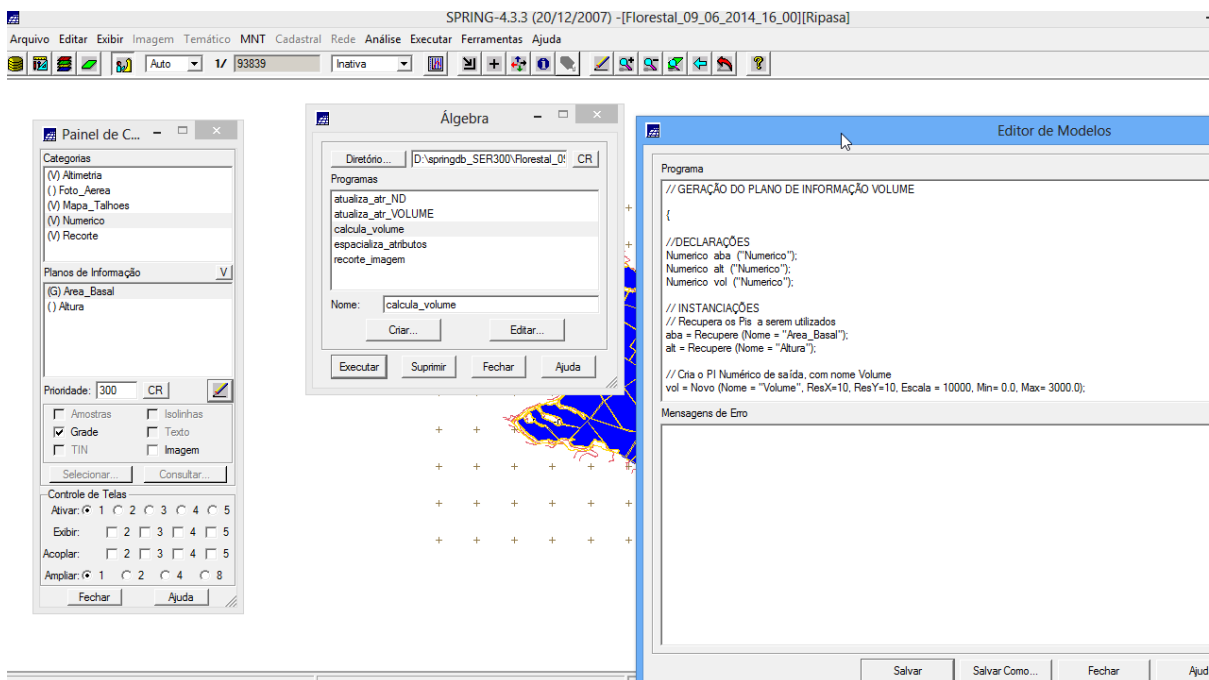

5 – Visualizar dados

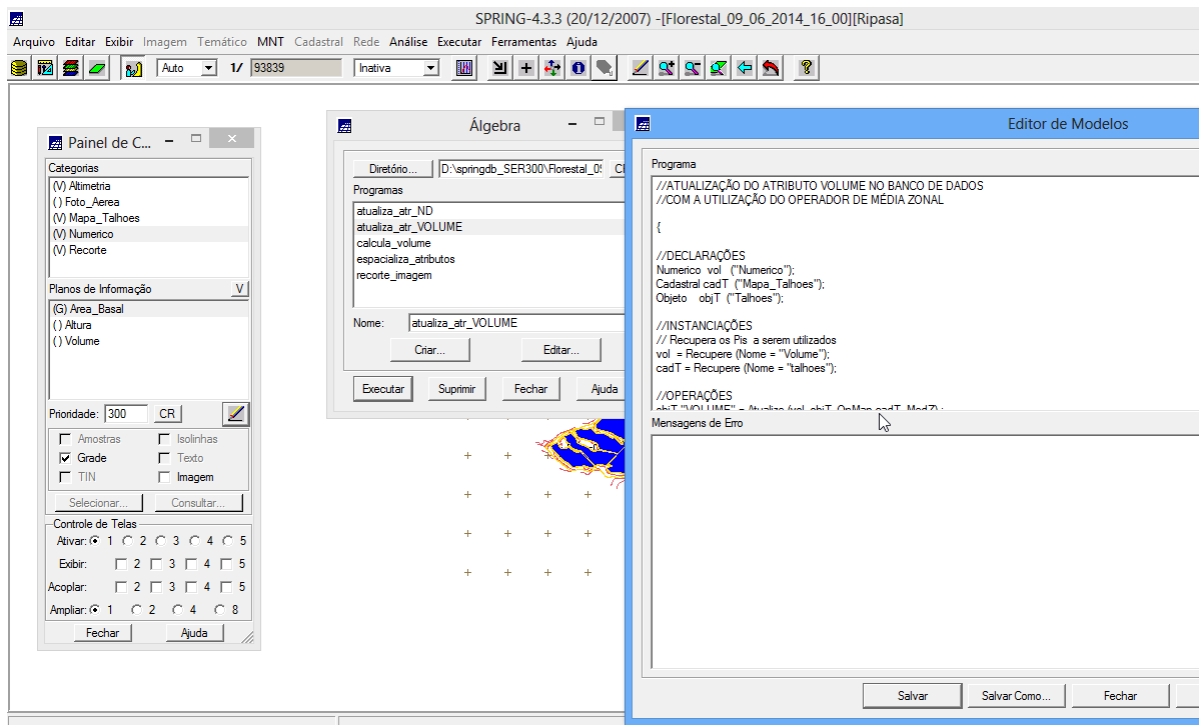

7 – Programas em LEGAL

7.2 Espacialização dos atributos

7.3 Gerar o plano de informação de volume

7.4 Atualização do atributo volume no banco de dados utilizando um operador de média zonal
