

Introdução ao geoprocessamento: Laboratório 5 – Análise Espacial de Dados Geográficos

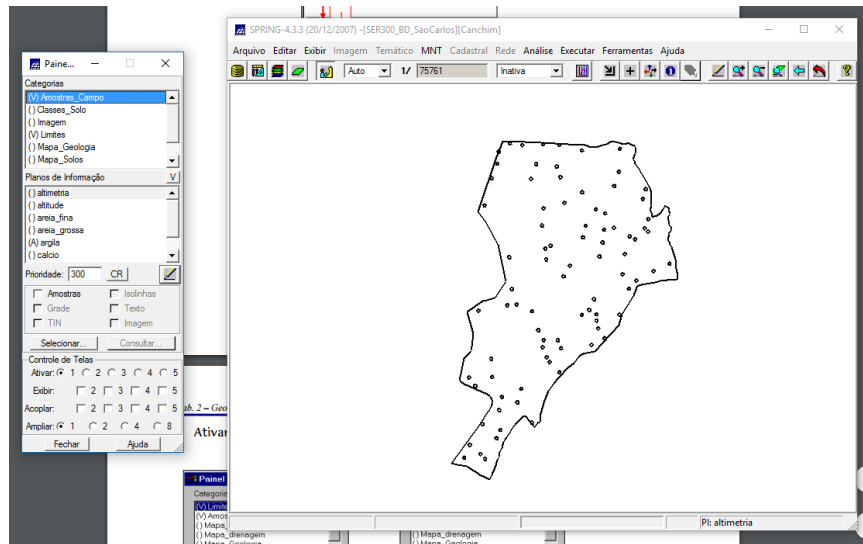

Rennan Andres Paloschi¹

Instituto Nacional de Pesquisas Espaciais – INPE

1. INTRODUÇÃO

2. CARREGAR OS DADOS NO SISTEMA SPRING

Ativar Painel de Controle e selecionar Planos de Informação (PI's)

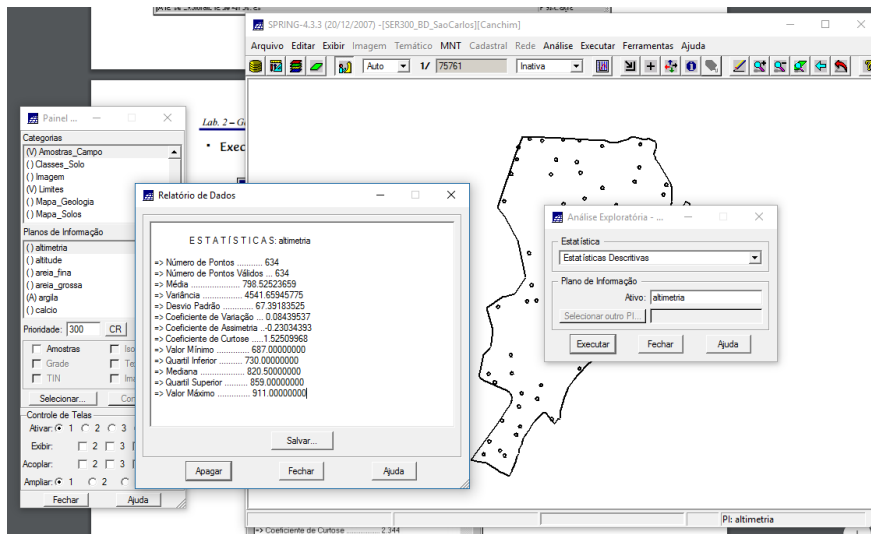

3. ETAPAS DA ANÁLISE GEOESTATÍSTICA

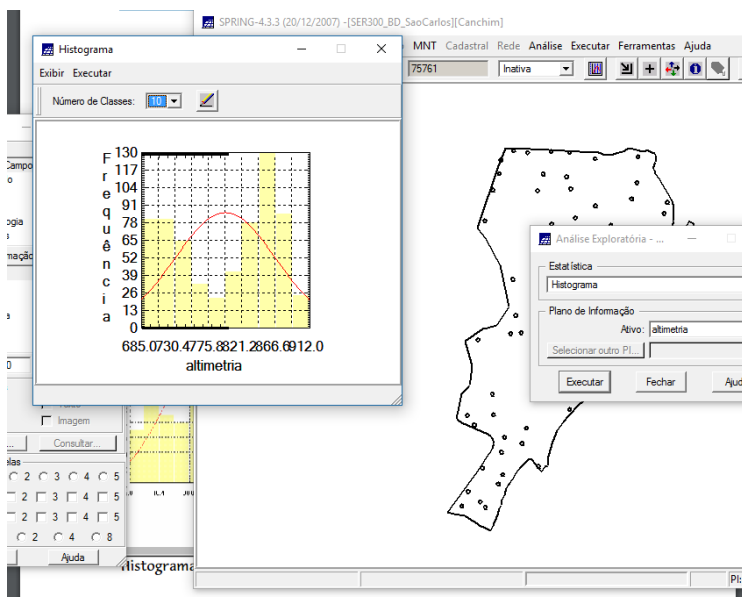

Apenas o fluxograma, não solicita nenhuma ação.

4. ANÁLISE EXPLORATÓRIA

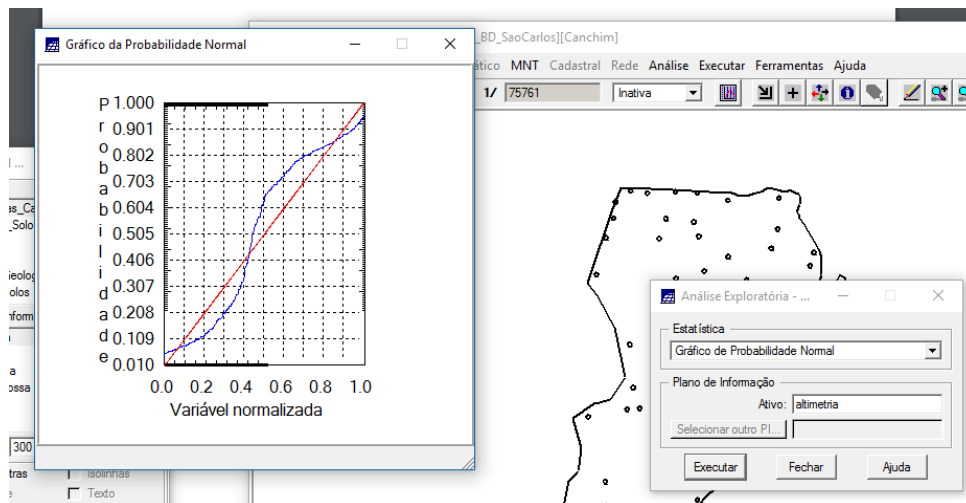

- Inicializando a análise exploratória no sistema SPRING

Executando histograma

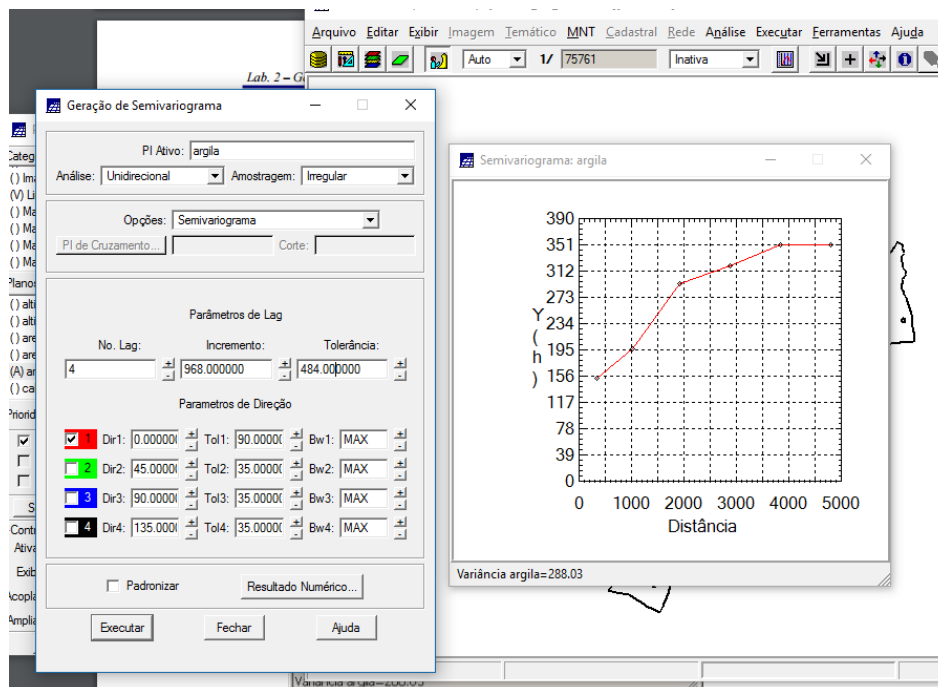

- Executando o gráfico da probabilidade normal

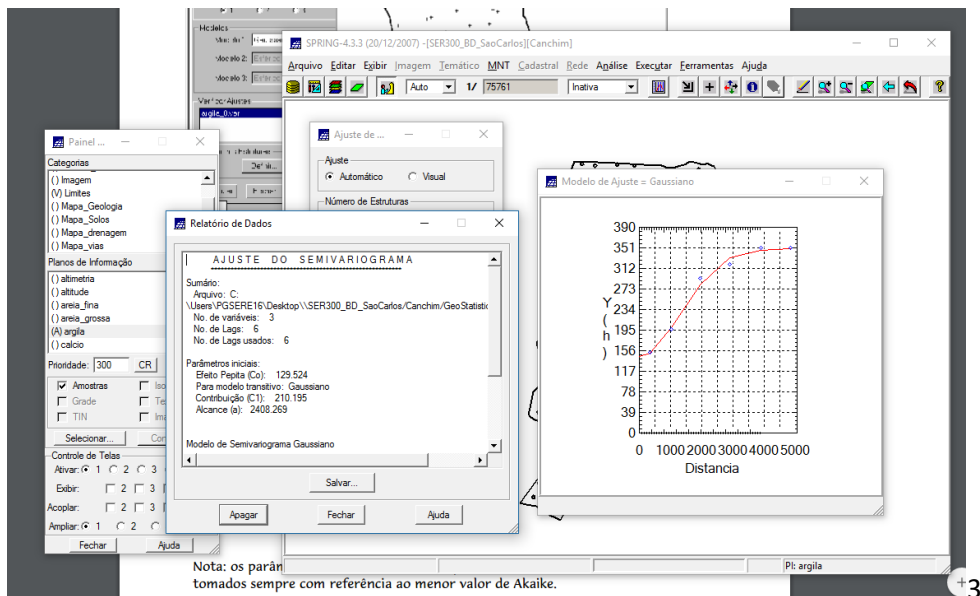

5. CASO ISOTRÓPICO

5.1 ANÁLISE DA VARIABILIDADE ESPACIAL POR SEMIVARIOGRAMA

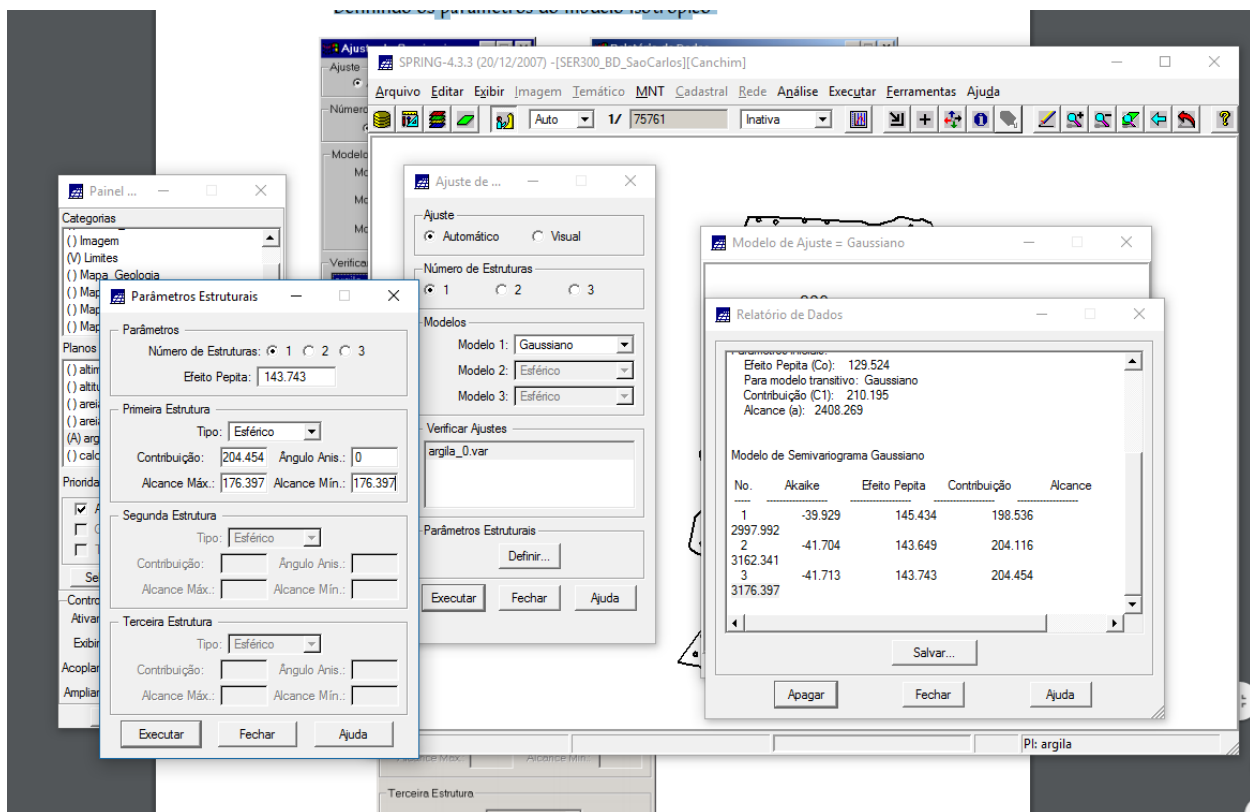

5.2 MODELAGEM DO SEMIVARIOGRAMA EXPERIMENTAL

Foi ajustado para um modelo gaussiano

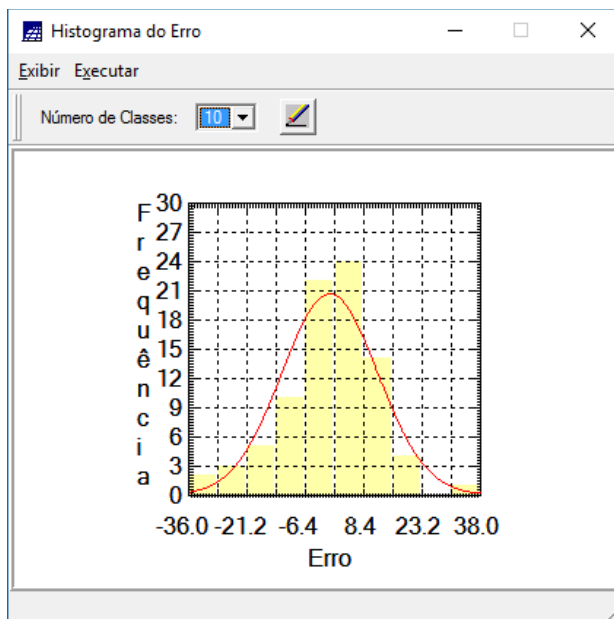

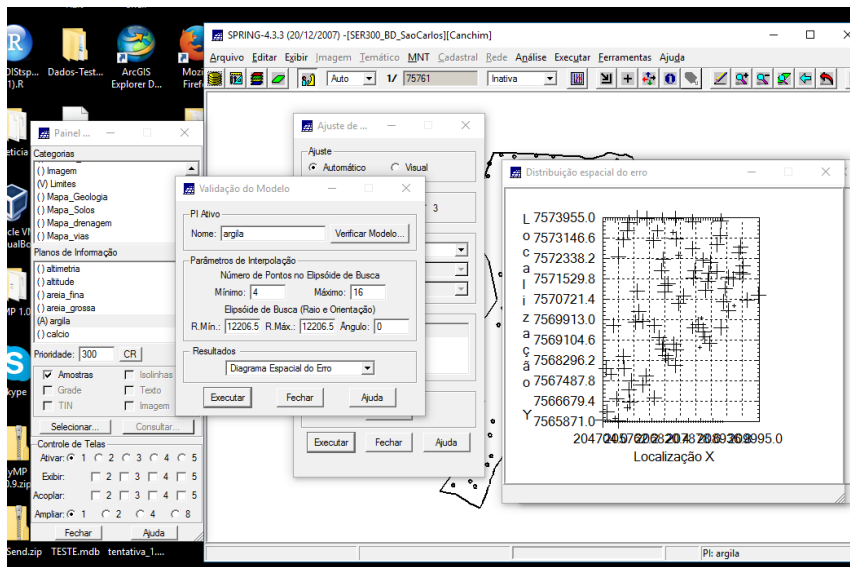

Definindo os parâmetros do modelo isotrópico

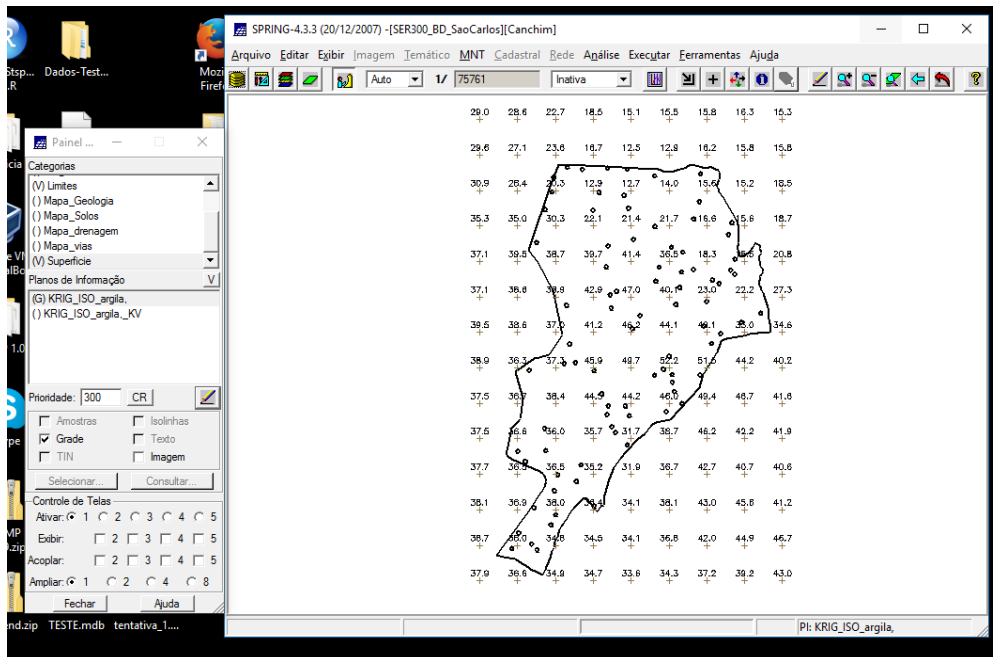

5.3 VALIDAÇÃO DO MODELO DE AJUSTE

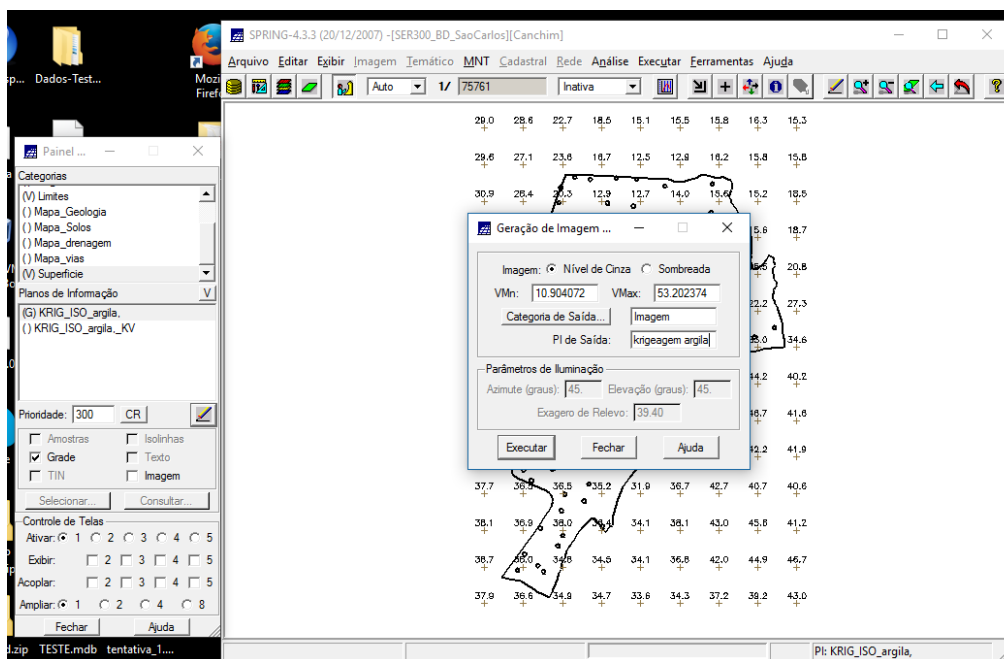

Diagrama espacial do erro

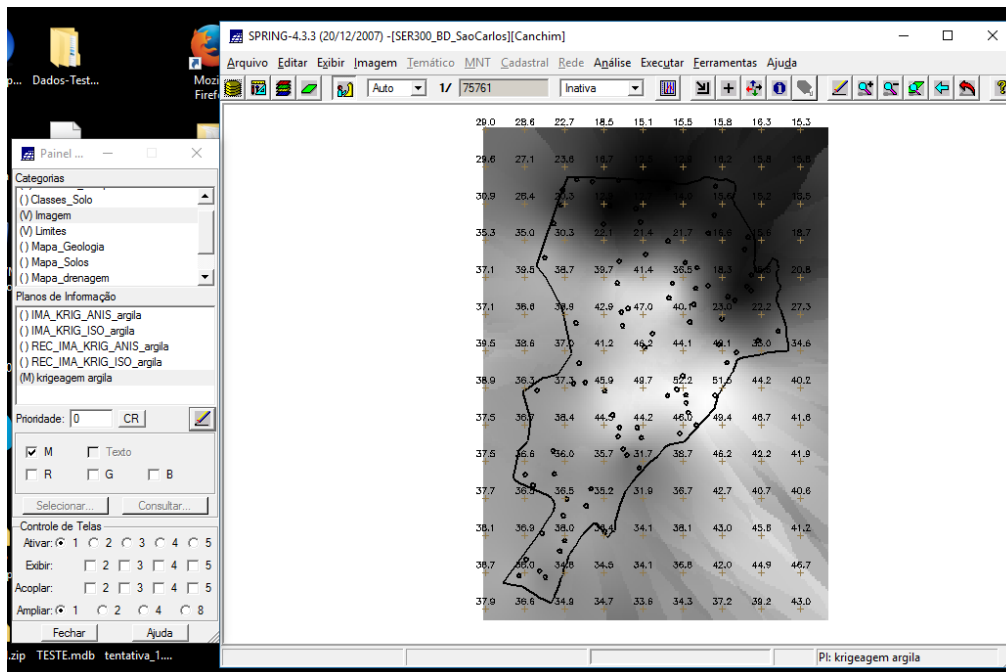

5.4 INTERPOLAÇÃO POR KRIGEAGEM ORDINÁRIA

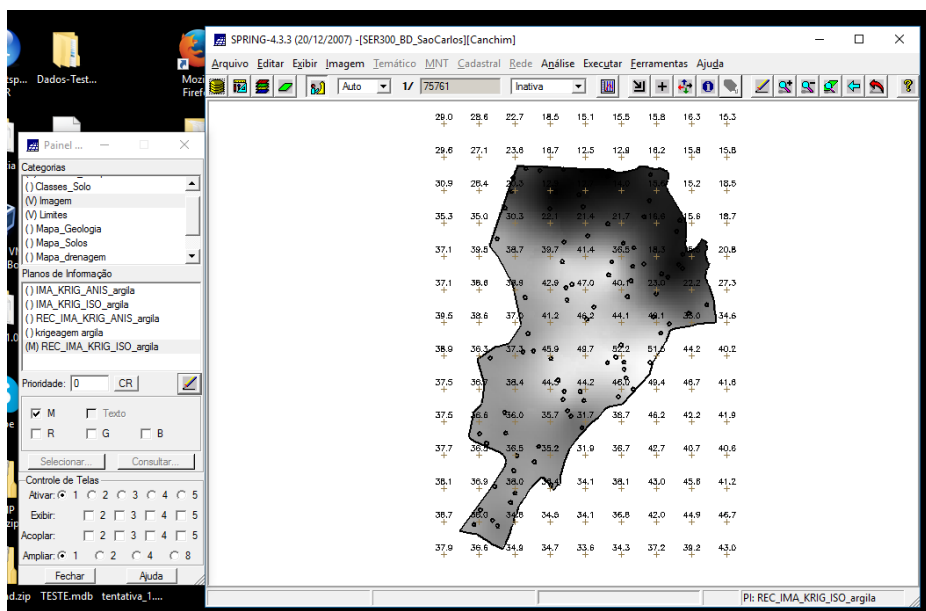

5.5 VISUALIZAÇÃO DA SUPERFÍCIE DE ARGILA

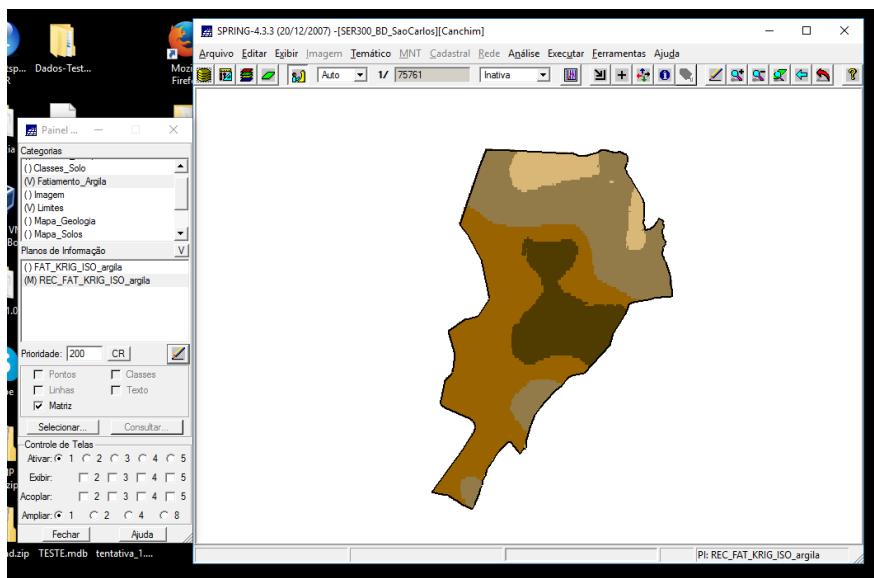

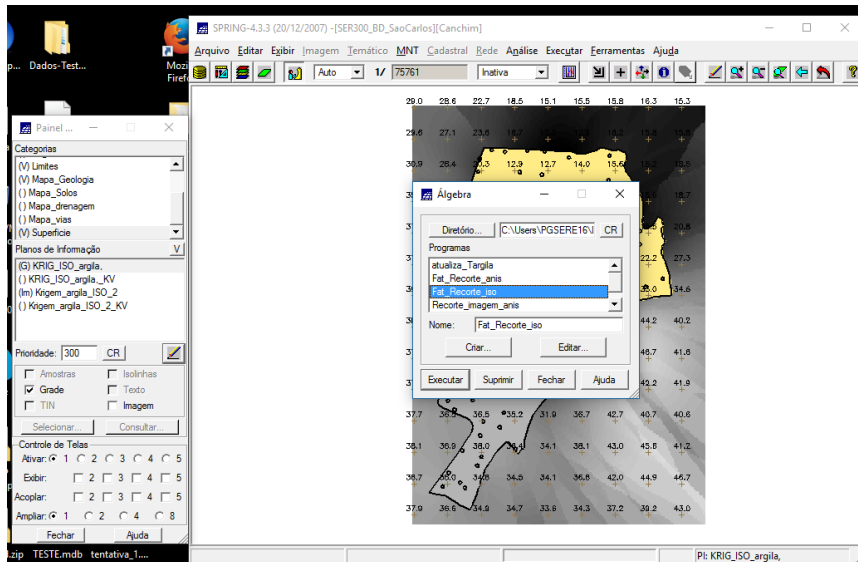

Executar recorte da imagem gerada utilizando LEGAL

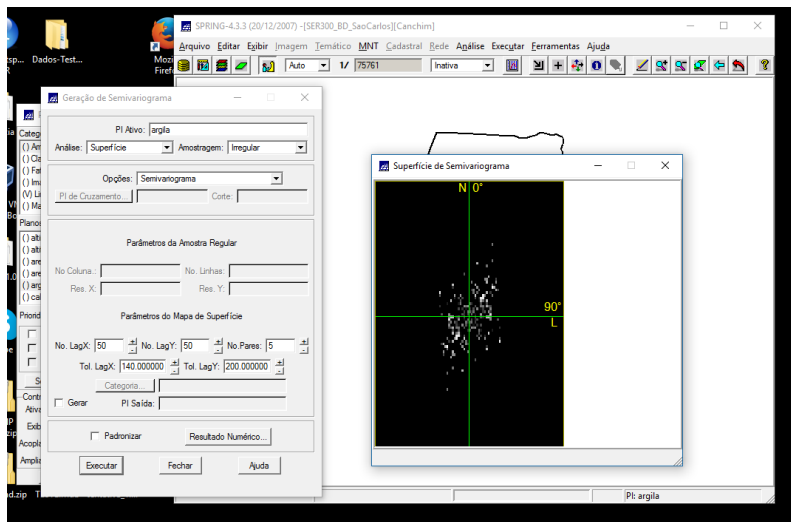

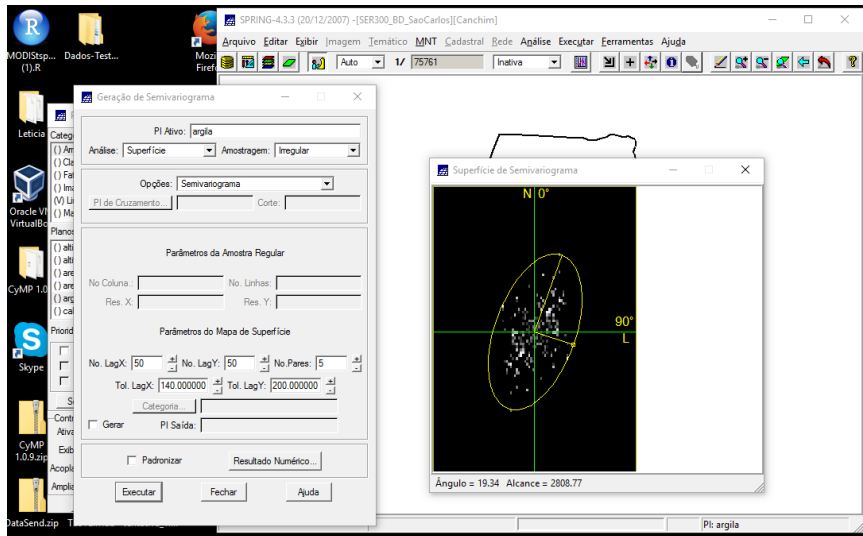

Executar Fatiamento e recorte da grade do teor de argila, segundo classificação especificada na página 4.

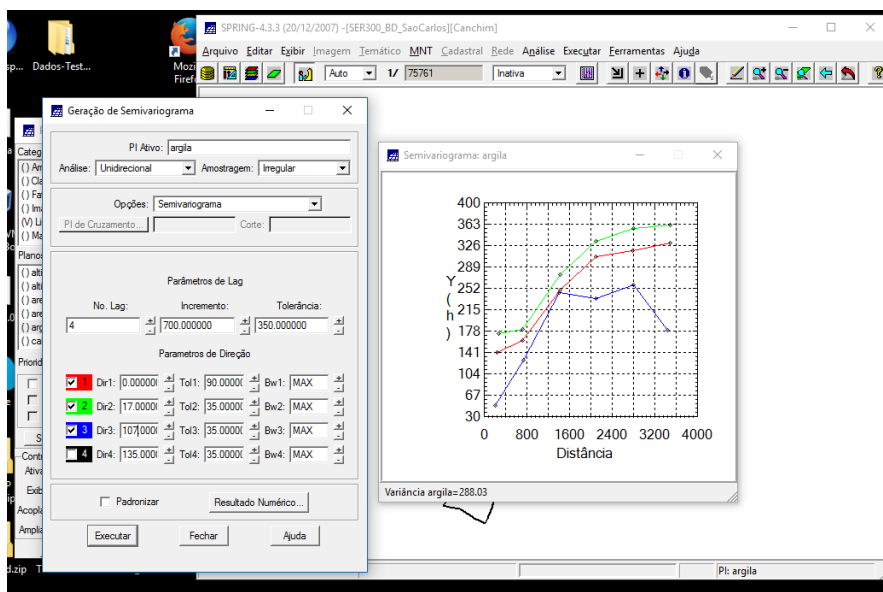

6. CASO ANISOTRÓPICO

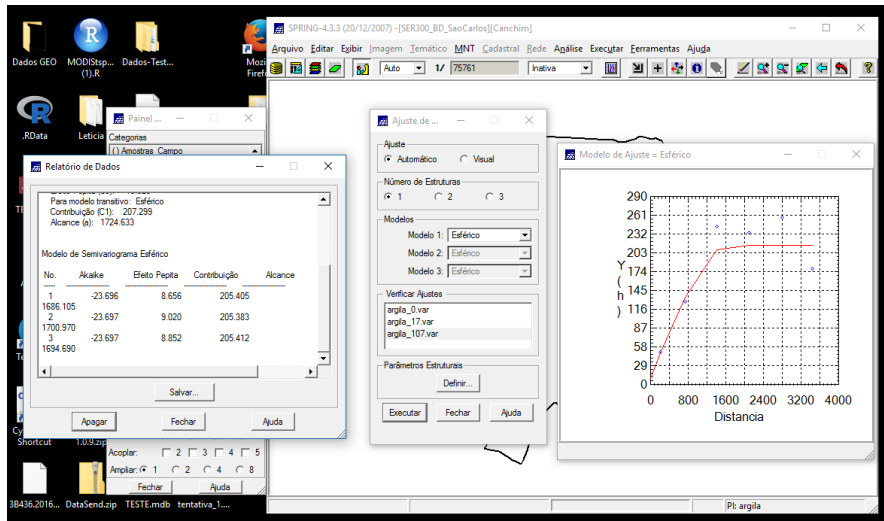

6.1 DETECÇÃO DA ANISOTROPIA

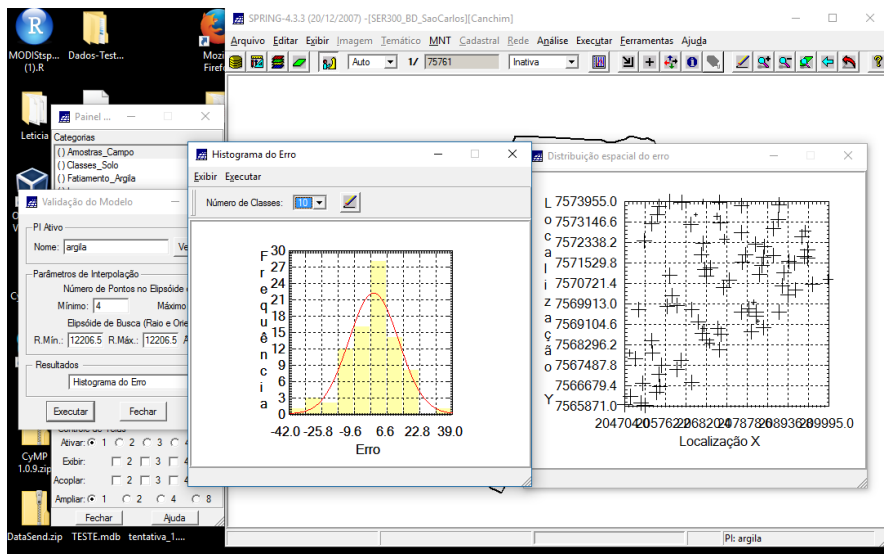

6.2 GERAÇÃO DOS SEMIVARIOGRAMAS DIRECIONAIS

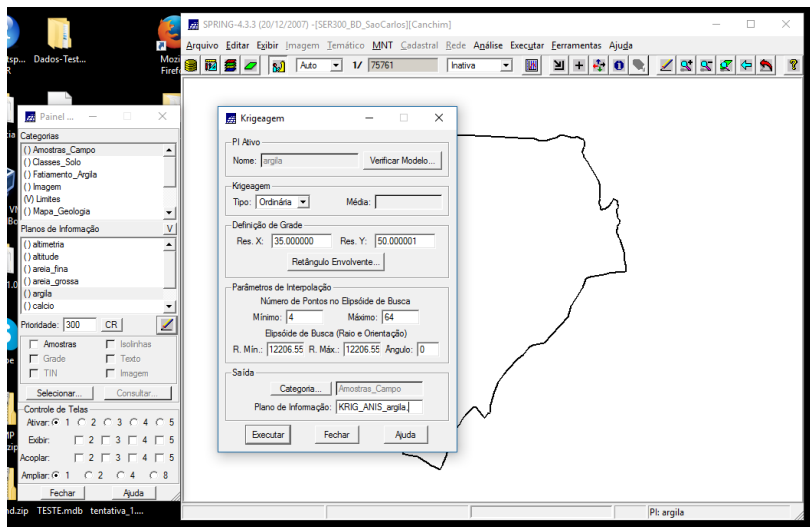

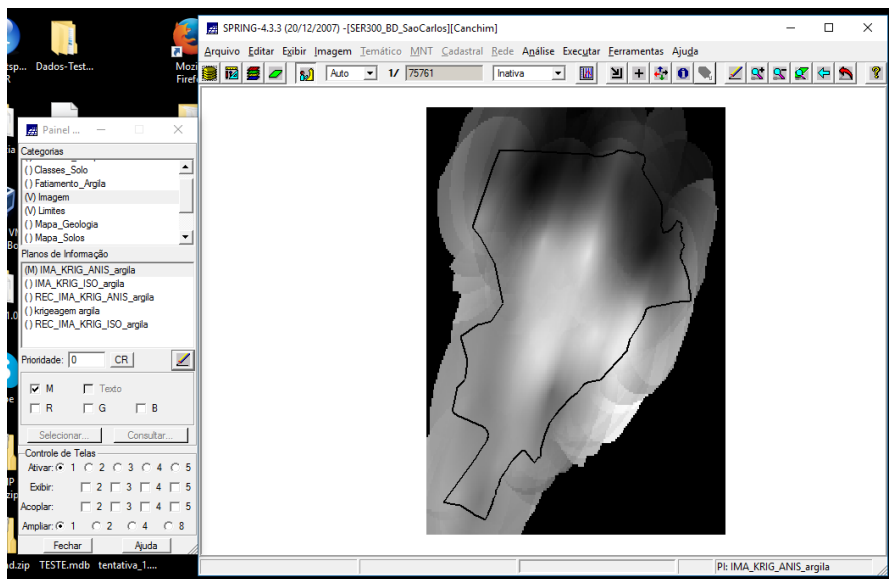

6.5 VALIDAÇÃO DO MODELO DE AJUSTE

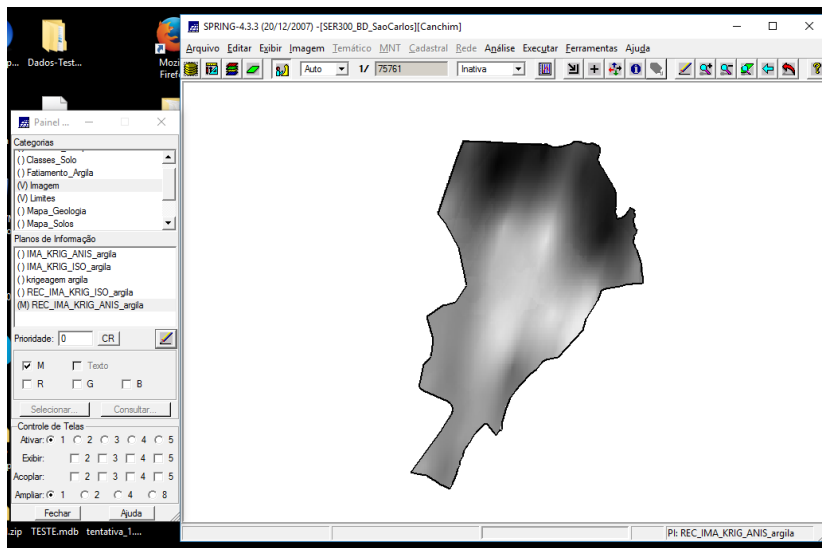

6.6 INTERPOLAÇÃO POR KRIGEAGEM ORDINÁRIA

6.7 VISUALIZAÇÃO DA SUPERFÍCIE DE ARGILA ORIUNDA DO MODELO ANISOTRÓPICO

Executar recorte na imagem oriunda do modelo anisotrópico.

Executar Fatiamento e recorte na grade de Krigeagem oriunda do modelo anisotrópico.
